Datasheet Citypole (ID)

Citypole Wing

Citypole Curve

The Citypole; the ultimate litter bin. Stand alone. Large volume. Inviting. Extreme strength. Best ergonomics. Individualisation.
Stand alone, but with cleverly engineered methods for rock solid fixation. A volume of 100 litre, when using an aluminium inner liner, yet a weight of only 4 kg. When using the sack holder, 110 litre volume is possible.
The insert is large, these bins are mostly placed on high-traffic locations, citizens want to be able to throw their litter easily.
The strength is setting new standards; 4 mm thickness of steel. Doors are closing like a vault. Practically indestructible.
Still ergonomics are perfect: lock at 95 cm height, door opens more than 90°; aluminium inner liner feather light.
Individual design features however make the Citypole appealing for every city. Starting from the standard Citypole one can start modifying colours, roof designs, panel designs and logo's, to match the cities identity.
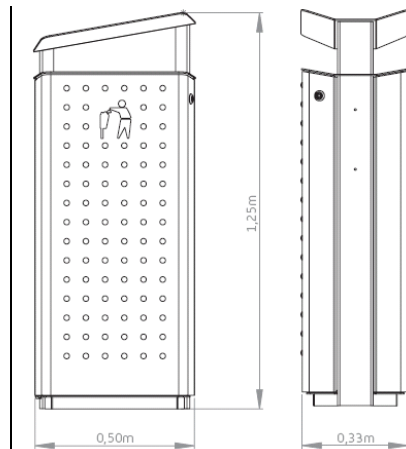

Materials: frame 4mm, panels 2,5 mm steel, all electrophoretic coated. Inner liner 1mm aluminium.
Lock: slam lock for triangular key

Dimensions Citypole

	Citypole Wing	Citypole Curve
Capacity in liters		
In inner liner	100	100
in sack holder	110	110
Height bin in mm	1243	1221
